

SMF Epic

Smart Mifare Intelligent Lockset

Description:

NSP Security's SMF EPIC range provides a discrete intelligent lockset that gives the feeling of home.

The minimalist reader and mechanical override retains the door integrity to provide a truly unobtrusive lockset.

The SMF EPIC design is key to maintain the style that architects and designers wish to achieve, and the EPIC's flexible choice of handles can offer both the security, reliability and flexibility Developers and Architects are looking to achieve.

The EPIC has been designed to integrate the power supply, reader and mechanical key override discretely into the door, enabling it to fit the aesthetics of both contemporary and classical ornate buildings installations.
